

Highlighting text

These are some examples for highlighting text.

Simple yellow highlight

If you just want to highlight text using yellow you can directly use the *hl* package.

Usage:

```
\usepackage{soul,color}
```

```
This is \hl{an example}
```

Example:

This is **an example**

Comments:

To highlight references and cites use:

```
This is \hl{an example with reference {\ref{fig:??}}}
```

This is **an example with reference ??**

Highlighting text with different colors

Highlighting text using different colors is especially useful when different authors want to leave comments on a document.

Usage:

```
\usepackage{soul}
```

```
\usepackage[usenames,dvipsnames]{xcolor}
```

```
\newcommand{\hlc}[2][yellow]{ {\sethlcolor{#1} \hl{#2}} }
```

```
This is \hlc[green]{an example} using different \hlc[Dandelion]{colors}.
```

Example:

This is **an example** using different **colors** .

Comments:

You can also define a different color for each different author:

```
\usepackage{soul}
\usepackage[usenames,dvipsnames]{xcolor}
\newcommand{\hlroberto}[1]{ {\sethlcolor{SkyBlue} \hl{#1}} }
\newcommand{\hlprimal}[1]{ {\sethlcolor{Dandelion} \hl{#1}} }

-----

This is \hlroberto{an example} using different colors for different
\hlprimal{authors}.
```

This is **an example** using different colors for different **authors** .
